

Your partner in embedded
tecnology for Innovation

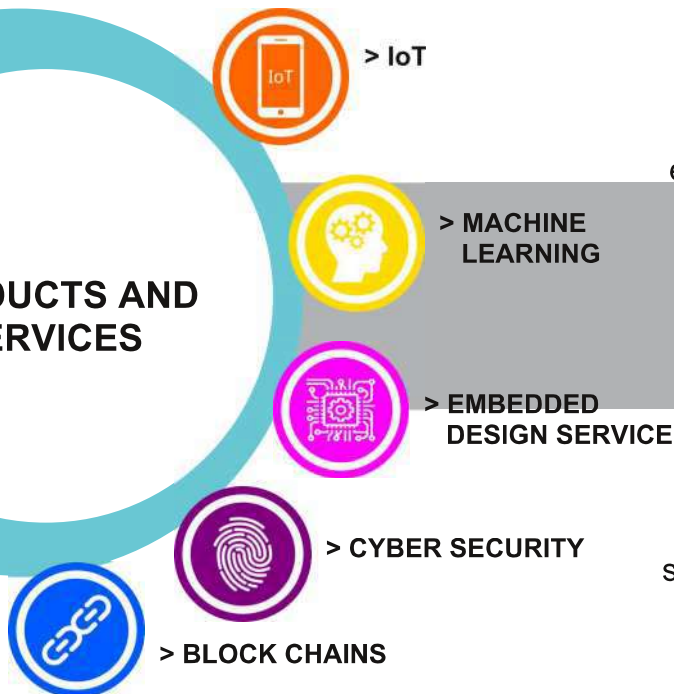

Our solutions
for your projects

ABOUT US

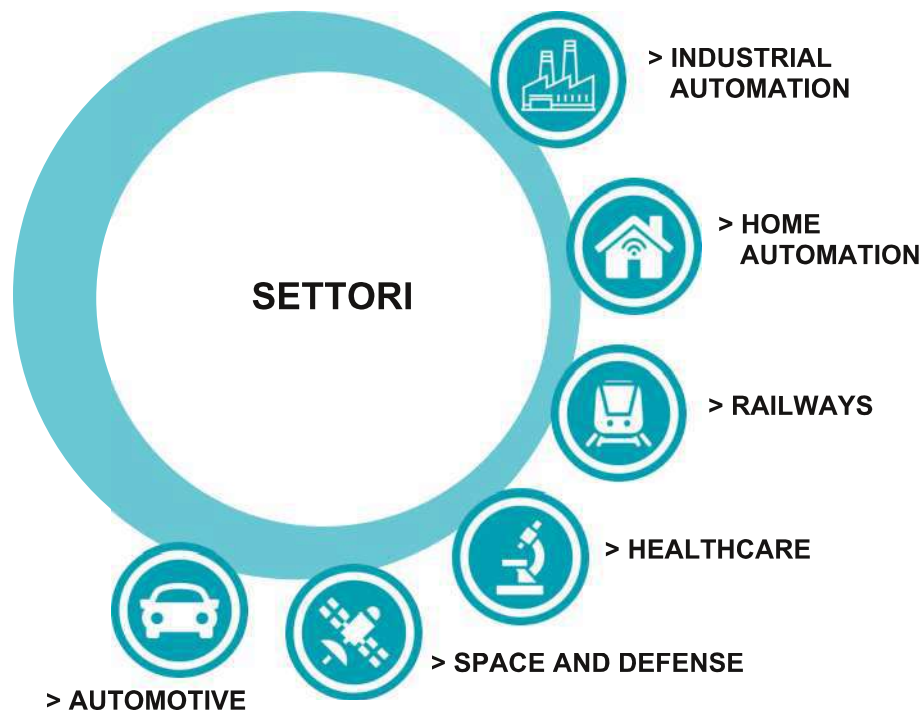

DAVE Embedded Systems is an innovative SME that has been operating in the Embedded sector for over 20 years. The company has always invested heavily in human capital, technology and the procedural aspect of the business in order to be able to guarantee its customers a structure capable of supporting their needs by responding with professionalism and competence while keeping all the KPIs under control. required project.

PRODUCTS AND SERVICES

The design of an integrated system requires the integration of different skills in different areas. DAVE Embedded Systems' business model is designed around this concept. We provide a series of services in order to support customers with our transversal skills in the design and development of embedded solutions. We provide support by designing customized hardware solutions such as carrier cards or SOM System On Module which we also offer on the shelf. We offer our expertise in the design of graphical user interfaces and / or in the customization of the sw design on the embedded device. In addition, we take care of the connectivity and the edge / cloud interface, designing secure solutions. Natural evolutions of this concept are our services relating to the field of Artificial Intelligence and Machine Learning. Cyber Security and the Industrial Block Chain complete our indispensable proposal when it comes to connected objects that manage or carry out transactions that can also have a financial / contractual effect. In summary, DAVE Embedded Systems proposes itself as a global partner able to support customers focused on their core-business for which they need to use our sophisticated technologies.

The experience and know-how of DAVE Embedded Systems have led the company to work in various sectors over the years. In particular, the culture and company procedures have been deepened and tested in some of them, thus learning to manage the design, construction and qualification of products following the regulations in force both as regards the HW and SW aspects and as regards the environmental aspects. This allowed the company to identify specific criticalities and to be able to deal with them, thus acquiring an important added value. Customers who decide to entrust their projects are aware that DAVE Embedded Systems has the necessary knowledge to complete the project on time and in the expected manner. Thanks to this experience, DAVE Embedded Systems has learned to pay particular attention to the traceability of its products in order to be able to manage all the possible critical issues in the field at the Serial Number level.

Over the years, DAVE Embedded Systems has created its independence in the production of embedded systems in order to guarantee its customers a reliable, technological partner who knows the products it manufactures in detail. Thanks to this approach, the production department is able to meet the highest quality standards required by the JEDEC and IPC regulations as well as to offer high added value services such as painting, resin coating and sealing of SMT components and connectors in particular for railway and space and defense sectors.

- > ISO 13485
- > ISO 9001
- > IPC 610 Standard
- > JEDEC Standard
- > REACH regulation
- > RoHS regulation
- > Conflict Mineral

Working in highly innovative servers, DAVE Embedded Systems has strongly believed in the quality policy and today can claim to be compliant with the highest standards of design and production of electronic embedded systems. The management of projects and products is integrated through the use of modern solutions for the management of product versioning and for Project Managing with particular focus on Life Cycle Management.

> CAREER DEVELOPMENT

> WORK EXPERIENCE

> INTERNSHIPS AND STAGES

DAVE Embedded Systems has set up a support program for students and workers in collaboration with numerous High Schools and Universities in the area in order to facilitate entry into the workplace with periods of on-the-job training. Finally, for DAVE Embedded Systems continuous training is essential for its collaborators who continue to participate and deepen their know-how in their personalized career path.
